New Survey Reveals Challenges Faced by Chronic Pain Patients in Seeking Treatment

Research conducted in the United Kingdom for pain awareness month points to a gender difference in the experience of chronic pain, pursuing pain relief and the feeling of being understood

IEMEL HEMPSTEAD, United Kingdom - 5 Sept. 2023 – Boston Scientific (NYSE: BSX) today revealed survey esults of 2,000 people living with chronic pain in the United Kingdom (UK) that unveiled the health impact, tigma, and other barriers affecting treatment. The research found that women with chronic pain feel significantly ess understood than men by their partner, friends, or family, as well as by health care professionals. On average cross all these groups, 36% more women than men strongly disagree with the statement that the full extent of heir pain is understood.

is estimated that 10.5 million people, a quarter of the UK adult population, live with chronic pain - defined as ontinuous and long-term pain lasting for more than 12 weeks.[1][2]The research indicates a gendered element mpacting access to treatment, as 41% of women said they feel that their doctor does not understand the full cope of their chronic pain, while for men this is 25%. One in five women have not received help from a health are professional, nor do they plan to seek it within the next four weeks (21% vs. 15% of men).

Effective ways to manage chronic pain exist, but as the survey reveals, patients are facing barriers that may revent them from reaching out to get help," says Dr. Sarah Love-Jones, pain physician and anaesthesiologist at lorth Bristol National Health Service (NHS) Trust. "More awareness is needed for the negative impact of chronic rain on the lives of those affected, to give them hope and to identify the right treatment for them."

he research also revealed that wider recognition of chronic pain is needed (86%), that there is not enough public wareness about it (77%), and that there is still a stigma attached to chronic pain that may prevent people from ursuing support (79%). The NHS advises those living with pain for more than 12 weeks to speak to their general ractitioner.[3]

At Boston Scientific, we are committed to those living with chronic pain to help them find relief and live a lealthier life," said Vincent Sourdaine, vice president, Neuromodulation in Europe, Middle East and Africa (EMEA) it Boston Scientific. "We witness every day that a health care professional can have a significant and positive mpact on the individual's well-being."
